

SNIPER: XCELERATED CYBER HUNTING

We Are Your Cyber Security Vanguard

The adage “the best defense is a good offense” has never held more true than in today’s world of advanced cybersecurity threats and zero-day vulnerabilities. With the continued failures of traditional defense mechanisms (e.g., firewalls, IDPS, SIEM tools, training) in preventing network intrusion and data compromises, the time is ripe to take a truly active approach toward security and risk management. Xcelerate Solutions immerses ourselves in your enterprise’s unique mission, seeking out, quarantining, and destroying bad actors in and around your system’s boundaries.

Our cybersecurity experts, hunters, and information systems security professionals are at the forefront of their field, leading in thought and action, and creating and deploying innovative, results-based solutions to manage your cybersecurity risk profile. We follow our agile and disciplined **SNIPER** approach as we rapidly detect and eliminate threats to your mission systems and cyber infrastructure.

SNIPER

SCOPE out the types and depth of data to analyze and the adversaries who would be interested in your systems based on our assessment of your cyber risk posture and our knowledge gleaned from cyber threat intelligence sources.

NOMINATE “evil” user stories—malicious actions an attacker may perform—as priority attack vectors to evaluate.

IDENTIFY the processes, methods, algorithms, and enabling technologies to collect data, analyze potential threats, and detect nefarious activities.

PINPOINT, isolate, and eliminate advanced persistent threats (APT) in your enterprise through in-depth network, host, and data inspection and analysis.

ENHANCE future analysis, detection, and alerting through automation of the newly detected patterns of activity and close collaboration with operations.

READJUST tactics based on sprint success, new evil user stories, changes in your priorities, cyber threat intelligence, and the availability of enabling technologies, algorithms, and best practices.
